School Management Software

Project Requirements Document

---

1. Core Modules

- **Dashboard** — institute overview, quick stats, notices, birthday widget, HR/SMS summary cards
- **Student Management** — admission, profile, class/section assignment, ID cards, transfer/promotion
- **Teacher & Staff Management** — profiles, subject/class assignment, HR records (male/female count, total staff)
- **Student Accounts** — fee structure, dues, payment history, invoices
- **General Accounts** — institute-wide income/expense, ledgers
- **Student Attendance** — daily attendance, class-wise reports, absence alerts
- **Teacher Attendance** — check-in/out, leave tracking
- **Exam & Result** — exam scheduling, marks entry, result publishing, report cards, grading system
- **Routine** — class/exam routine builder and viewer
- **Accessories** — ID cards, certificates, admit cards, other printable assets
- **SMS Management** — SMS balance, bulk SMS, purchase SMS, auto-notification triggers (attendance, results, fees)
- **Payslip Management** — staff salary generation and payslip printing
- **Holiday Management** — academic calendar, holiday list
- **Online Admission** — public-facing admission form, auto-enrolls into Student module
- **User Management** — role-based access (admin, teacher, accountant, parent, student)
- **Website Management** — basic CMS for the institute's public site
- **Support/Token System** — support tickets (Create New Token, Solved/Pending), software billing status
- **Institute Settings** — EIIN number, academic year, branding, basic configuration

2. Required AI Integration (Mandatory)

E-commerce features are not permitted for this project. AI must be integrated as a genuine value-add rather than a bolt-on:

- **AI-based result/performance analytics** — flag at-risk students from attendance and marks trends
- **AI attendance anomaly detection** — auto-flag irregular patterns per student/teacher
- **AI-generated report summaries** — auto-draft narrative progress reports from raw marks/attendance data
- **Chatbot/assistant for parents & students** — answer queries on fees, routine, results via natural language
- **Smart SMS/notification drafting** — AI composes context-aware alerts (e.g. personalized fee reminders)
- **AI-assisted routine/exam scheduling** — conflict detection and optimized timetable suggestions

3. Non-Functional Requirements

- Role-based authentication (admin / teacher / student / parent / accountant)
- Multi-branch / multi-institute support if scalable
- SMS gateway integration (local Bangladesh provider)
- Responsive UI (mobile-friendly for parents and teachers)
- Data export (PDF/Excel) for results, payslips, attendance
- Audit logs for financial and academic record changes

4. Suggested 3-Month Agile Breakdown (4-Person Team)

Month	Focus
Month 1	Core setup — authentication, student/teacher CRUD, attendance, dashboard
Month 2	Accounts, exam/result, SMS, routine + start AI module (analytics/chatbot)
Month 3	AI feature polish, payslip, admission, testing, deployment
